

Part Number 68-2116 113 Chassis Wood Kit

This Kit was manufactured per the instructions of Mercedes Benz to make the two dash pieces just a little longer than the original drawings to allow for trimming as necessary on the outer end near the pillar post. The cars were hand made and variations can occur in the length of one or both of the dash pieces.

The other area that could require custom trimming is the area behind the instrument cluster. The dash was originally covered in vinyl. Replacement leather or vinyl that is thicker than the original will decrease the space for the molding behind the dash. When this occurs, it may be necessary to shave the width of the molding to fit.
